

# Jumbo Tube Stand Setup

①

Insert the 2 vertical poles into the feet and screw the pole in from feet bottom.

Before tightening the bolt make sure the through hole on the bottom is 90 degrees from the base

note: Vertical poles have 2 pole locks on them

②

Connect the 2 horizontal pole sets together by screwing them into each other. These cross bars should have color dots to indicated which goes to where.

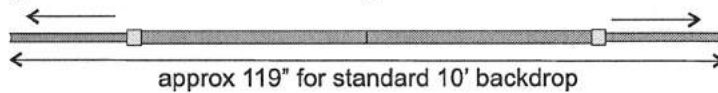

③

**IMPORTANT** - Before extending any poles, be aware that if you pull them too far they will come out of the pole locks. There are warning strips on the pole if you get too far out.

If you do happen to pull the pole out, you must remove the pole lock nut - slide it up the pole - insert the pole into the plastic sleeve very carefully - then screw the pole lock back on. If you try and push the pole back in without taking the pole lock nut off, you will damage the plastic sleeve and it will not tighten anymore.

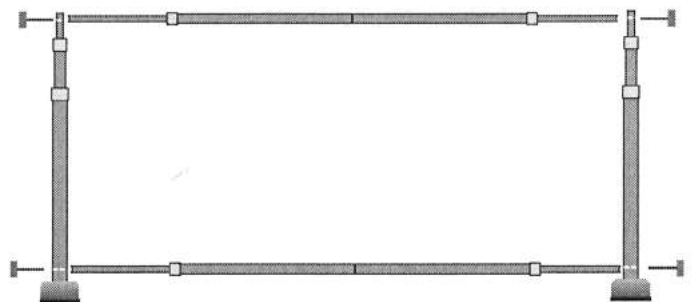

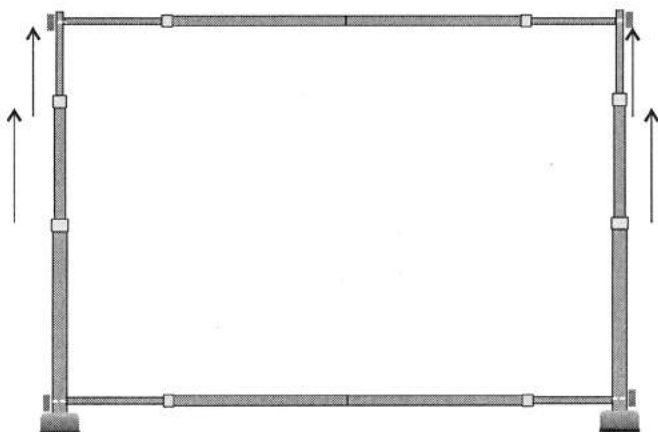

Loosen the pole lock nuts and slowly slide out the nested pole. You want to make the length of the pole the width of your fabric or vinyl. Poles should be extended evenly on both sides.

④

At this point you should be sliding your graphic's pole pockets, over the poles.

Attach the horizontal poles to the vertical poles with the thumb screws. Note - you may need to extend the vertical poles to get the thumb screw through the bottom hole.

⑤

Extend the vertical poles up evenly to tighten the graphic. Again, make sure you don't pull the pole out too far as it can come apart.
